Subject: Boom Arms and Display Arms

Below is a matrix listing all the different types of Boom Arms and Display Arms provided by NAD over the recent past. But before we get into the details of what's new, a couple of definitions are in order to prevent, or minimize confusion. A *"Boom Arm"* is used to manage patient lines, monitor leads, etc. A *"Display Arm"* supports and allows articulation of the remote display panel.

Boom Arms

The matrix below re-introduces two "Patient Line Boom Arms" that will facilitate all current production machines, plus the NM3. The new product numbers are #4108912 and #4112855. Their current list price is $900.00.

Display Arms

Effective with this bulletin, you must make a choice at order entry of a Narkomed 2C or Narkomed 4, whether you want the current "Long" Display Arm or the new "Short" Display Arm.

The new Short Display Arm was designed for those Customers who position the display over the absorber and do not utilize the articulation capability of the long arm. This may be due to either a personal preference of the clinician or physical constraints of the location. The new part number is #4113123-001, and there is no price difference between the two display arms. Attached is a drawing for your reference.

MACHINE	BOOM ARMS		DISPLAY ARMS		
	w/o ORDM	w/ORDM	Non-Articulating	Long	Short
Narkomed 3	4108912	4108912	4111212*	n/a	n/a
Narkomed 2B	4108912	4108912	4111212*	4113122*	n/a
Narkomed 2C	4112855	4112855	n/a	4113123-002	4113123-001
Narkomed 4 (Early models)	4108912	4108912	4111212	n/a	n/a
Narkomed 4	4112855	4112855	n/a	4113123-002	4113123-001
